DETAILED ACTION

1. In response to the amendment filed on 06/18/2003, claims 31-55 are pending in this application as a result of the addition of claim 55.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 31-54 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 31, the claim is confusing, vague, and indefinite. For example, regarding the phrase "deviating a nominal operating setting" is not clear how the device deviates from a nominal operating setting. The claim does not recite any thing or device to perform such an operation. Further, the phrase "induced in response to the deviating" is not clear because how the device deviates from a nominal operating and how the device senses the voltage change across the active region of the gain medium induced in response to the deviating. The claim does not recite capable of adjusting the nominal operating setting of the optical element.

Regarding claims 43 and 52, the claims are confusing, vague, and indefinite. For example, regarding the phrase "the control system to deviate a nominal operating

Application/Control Number: 09/900,426

Art Unit: 2828

setting of the optical element to induce a voltage change across the gain medium and to adjust the nominal operating setting in response to the voltage change to tune the optical element", it is not clear because how a nominal operating setting of the optical element deviate. How the laser deviates the loss characteristic from a nominal operating seeing to induce a voltage change across the means for emitting the optical beam? Further, the claims fail to recite any structure in order to adjust the nominal operating setting in response to the voltage change to tune the optical element. How the optical element, control system adjust the nominal operating.

Regarding claim 44, regarding the phrase "the control system further to dither the nominal operating setting to induce a modulated voltage across the gain medium and to adjust the nominal operating setting in response to the modulated voltage to tune optical element" renders claim indefinite because it is not clear what is the nominal operating setting. How the control system dithers the nominal operating setting to induce a modulated voltage across the gain medium and to adjust the nominal operating setting in response to the modulated voltage to tune optical element.

Claims 32-42,44-51 and 53-54 depend from rejected claim 31, 43 and 52 thereby render these dependent claims indefinite.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 09/900,426

Art Unit: 2828

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

35 U.S.C. § 102(e), as revised by the AIPA and H.R. 2215, applies to all qualifying references, except when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. For such patents, the prior art date is determined under 35 U.S.C. § 102(e) as it existed prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. § 102(e)).

Claims 31-43, 49, 52-54 are rejected under 35 U. S. C. § 102 (e) as being anticipated by Suni et al., U.S. patent No. 6,233,045.

Regarding claims 43,49 and 52-54 Suni et al. discloses a laser apparatus, comprising: a gain medium (101) to emit an optical beam along an optical path; reflectors positioned in the optical path and defining a laser cavity (See fig 9); a voltage sensor operatively coupled to the gain medium (101) (See fig. 9) to monitor voltage across the gain medium (see column 7, line 7-14); and a control system (107,108, 109, 100) operatively coupled to the voltage sensor and to an optical element positioned in the optical path, the control system to deviate a nominal operating setting of the optical element to induce a voltage change across the gain medium (101) and to adjust the nominal operating setting in response to the voltage change to tune the optical element (see fig. 9 column 9, line 1-36).

With respect to claims 31-42, the methods for operating a laser are considered as product by process steps.

Application/Control Number: 09/900,426

Art Unit: 2828

Claim Rejections - 35 U.S.C. § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth insection 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 44-48 and 50-51 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Suni et al., U.S. patent No. 6,233,045 in view of Flanders, U.S. Patent No. 6,366,592.

Regarding claim 44-48 and 50-51, Suni et al. disclose all limitation of the laser apparatus except for the optical element comprises one of a grid generator, a channel selector, and an electro-optic tuning element, and a nominal temperature of the optical element, dither. However, Flanders discloses the optical element comprises one of a grid generator (714, 716), a channel selector (354), and an electro-optic tuning element (410), and a nominal temperature of the optical element (See column 3, line 57-65 and Fig. 10), dither (410, 412).

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify Hester et al. to have grid generator, tuning element as taught by Flanders because those skilled in the art will recognize that such

Art Unit: 2828

modification and variations can be made without departing from the spirit of the invention.

Response to Arguments

- Applicant's arguments with respect to claims 31-54 have been considered and 5. are persuasive. Therefore, the rejection has been withdrawn.
- Any inquiry concerning this communication or earlier communications from the 6. examiner should be directed to Hung Vy whose telephone number is (703) 605-0759. The examiner can normally be reached on Monday-Friday 8:30 am - 5:30pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul IP can be reached on (703) 308-3098. The fax numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
